

HOW TO APPLY:

Remove the cap to administer the product.

Administer the product directly to the skin without massaging into the site.

Part the hair on the back of the animal in front of the shoulder blades until the skin is visible.

Place the tip of the tube on the skin and squeeze the tube to empty its entire contents directly onto the skin in one spot.

Avoid contact between the product and fingers.

Do not apply when the hair coat is wet.

Bathing or shampooing the animal 2 or more hours after treatment will not reduce the efficacy of Selavectine™.

Discard the used tubes in the household trash.

FAQ:

If I have an indoor pet, do I still need parasite protection?

YES! Parasites are not solely found outdoors. Pets can come into contact with these pests inside your home too if they've traveled in by way of other pets, on your clothing or shoes, or through open windows or doors.

Where can I get Selavectine™?

Please contact your veterinarian to discuss Selavectine™ for your pet and request the product by name.

Safe for puppies and kittens as young as 6 weeks

Selavectine™ is a Modern Veterinary Therapeutics product approved by Health Canada. For more information, please visit www.Selavectine.com or e-mail us at info@modernveterinarytherapeutics.com

Selavectine™

selamectin topical solution

Selavectine™

selamectin topical solution

Protect your pet from heartworm, fleas, and other common parasites.

Selavectine™ is a monthly topical parasiticide that provides pets with advanced protection from common parasites. Selavectine™ has the same active ingredient and same protection as the pioneer drug. The difference is in the cost savings. Selavectine™ is an outstanding value that can be used year-round on dogs, cats, puppies and kittens as young as 6 weeks of age.

Heartworms
Dirofilaria immitis

IMPORTANT SAFETY INFORMATION: See Product Insert. Selavectine™ may be safely administered to heartworm infected dogs and cats, however, it is recommended, in accordance with good veterinary practice, that all dogs ≥ 6 months of age be tested for existing heartworm infections before beginning medication with Selavectine™. Cats ≥ 6 months of age in heartworm endemic areas may also be tested to determine the presence of existing heartworm infections before beginning medication with Selavectine™. Selavectine™ is not effective against adult *D. immitis*; however it may decrease the number of circulating microfilariae. Selavectine™ should be used in animals of six or more weeks of age.
